EndNote™ X8
Research smarter

Research collaboration is on the rise…are you prepared?

Research collaboration has taken on a whole new meaning in the digital age. Your research team may be spread all over the world, with access to different resources, but you still need to work together in order to produce novel research. When you use EndNote, you will **research smarter**, leaving behind the tedious work of creating and formatting bibliographies, finding full text articles, and searching for previously saved notes and references. With freed up time and a central reference library to work from, your team will be able to truly collaborate together, taking your research to new heights.

Think globally but work locally

To produce the best research possible, it's absolutely critical to have a global and multidisciplinary mindset. When your team is able to **think globally but work like you're in one location**, you'll be able to unlock the full potential of your team's collective mind. If your global research team can work from the same reference library, you can spend your time sharing ideas and evolving your thinking rather than sharing documents via email.

Have the right research at your fingertips

Competition for getting published is at an all time high and delays due to mismanaged references could mean the difference between your work getting published or someone else's. In order to get to the finish line first, you need to always have **the right research the moment you need it**. When the right reference is only a click away, you know that your research will be as complete and accurate as possible, giving you a better chance of getting published.

Reduce your risk of rejection

You've worked so hard to get this far in your research project, but the hardest part may be yet to come. If you can't get your manuscript published, you won't be able to have an impact on your field or advance your career. When you can **reduce your risk of rejection** due to simple bibliography and citation formatting errors or mismatched journal submissions, you'll be positioned to be reviewed based on the quality of your work rather than a technicality, and will be one step closer to being published and cited.

Leave behind the tedious work of bibliographies and reference management and take your research to the next level.

Team access to one reference library

Work from a single reference library with up to 100 people, no matter where they are located or what organization they are affiliated with.

Overcome research limitations

For one upfront price, store and share as many references, documents and files as you need–a necessity for successful collaboration.

See what your team is doing

Instantly see the history of changes made to your shared library with a built-in activity log.

Let the full text find you

Initiate a search for full text PDFs across your subscriptions and freely available sources. When the article is found, it will automatically be attached to your reference.

Sort through years of work in seconds

Search across reference metadata, full text journal articles, file attachments, and your personal annotations and notes, to locate the research you need in just seconds.

Cite it right the first time

Insert citations and references from your EndNote library into your manuscript and automatically build a bibliography in over 6,000 styles right from Microsoft® Word.

Take the guesswork out of journal submission

Using EndNote online, find the journals where your research is most likely to be accepted based on an analysis of tens of millions of citation connections in Web of Science™.
